Question:

How to Activate the Net Report Alerting and Correlation Console on Windows Server 2003 with IIS 6?

Net Report Answer

Introduction

This Article explains how to activate the Net Report Alerting and Correlation Console on Windows Server 2003 with IIS 6.

Symptoms

An HTTP ERROR 404 error is displayed when the user tries to access the Net Report Alert and Correlation Console.

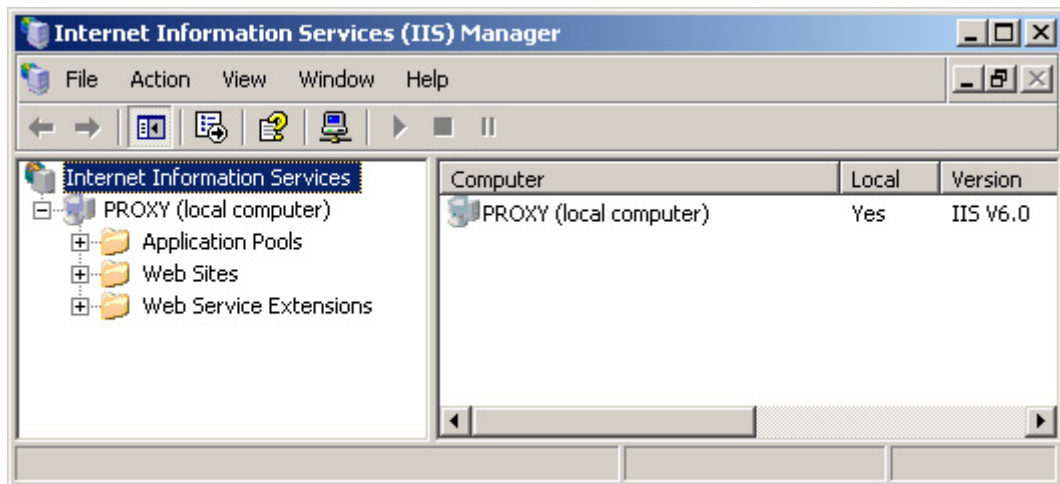

Cause

On Windows 2003, Active Server Pages are not allowed by default. The user must allow Active Server Pages to be executed in order to use the Net Report Alerting and Correlation Console.

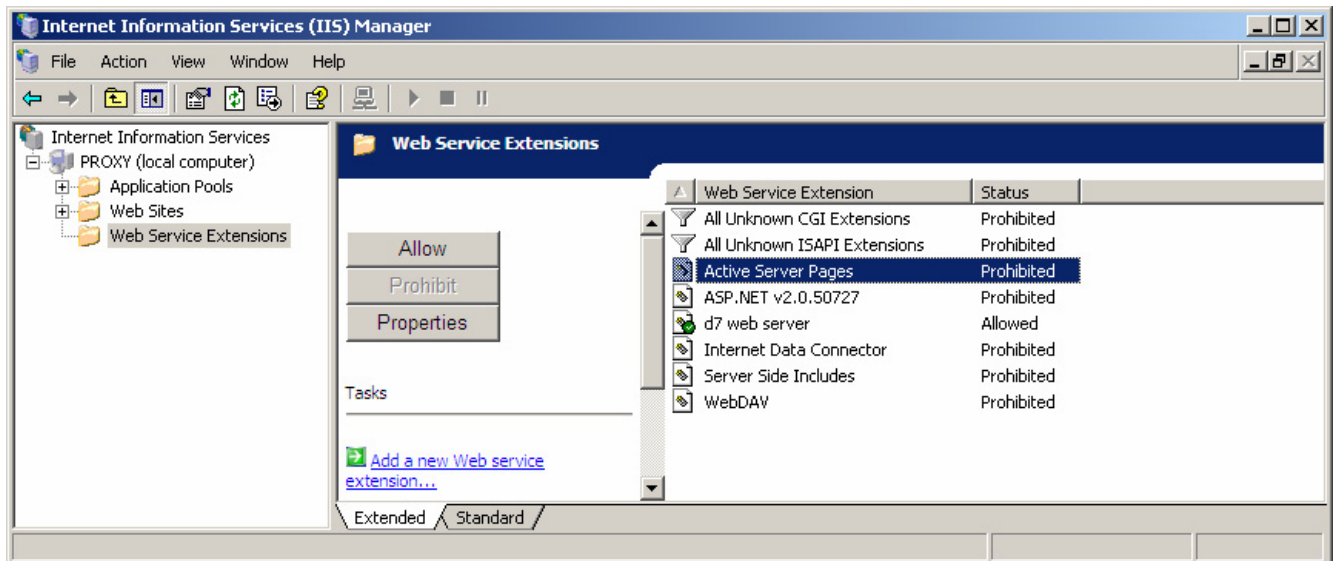

Solution

Steps

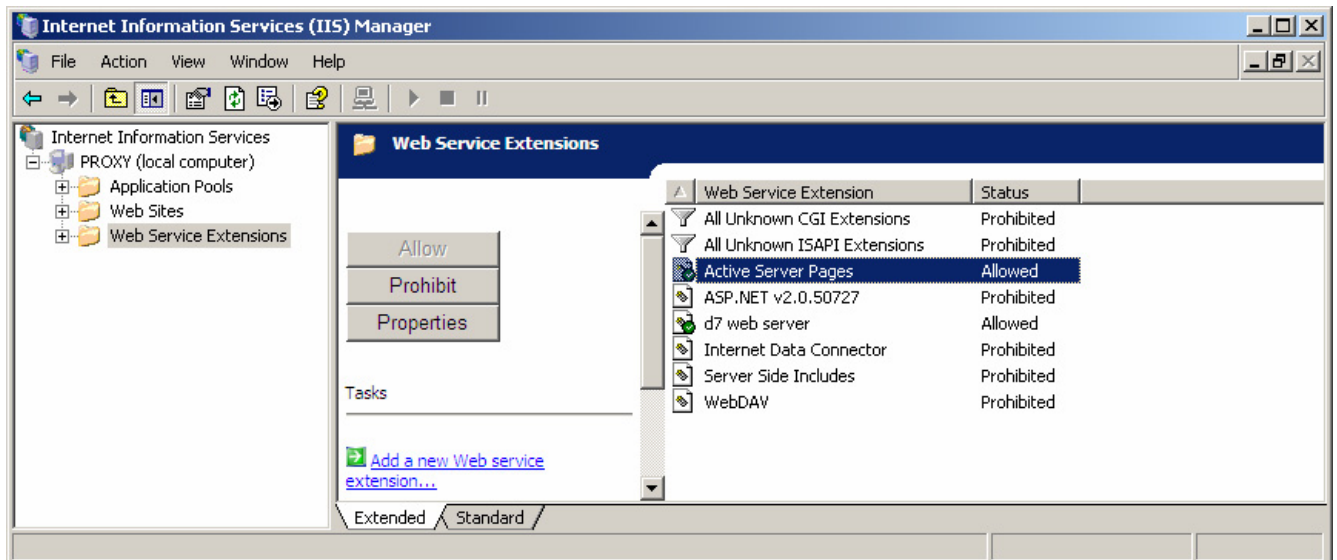

1. Select **Start> Control Panel> Internet Information Services (IIS) Manager**. The **Internet Information Services (IIS) Manager** console opens.

2. Select **Web Service Extensions** in the left pane.
3. Select the **Active Server Pages** in the **Web Service Extension** column in the right pane.

4. Click **Allow**.

5. Select **File > Exit**.
