SQL Server Tables or Column Descriptions are not visible

Date: October 14th, 2010

Problem:

SQL Server Tables or Column Descriptions are not visible using a Connect Data Source from a remote client workstation to a Server machine

Explanation:

Case1: the Connect Data Source on the local client workstation is pointing to an SQL Server database on the Server machine, and this SQL Server database is **not secured** in Click&DECiDE Administration Manager.
Problem1: you select the DataSetReport Database and the demo folder but no tables appears

Case2: the Connect Data Source on the local client workstation is pointing to an SQL Server database on the Server machine, and this SQL Server database is **secured** in Click&DECiDE Administration Manager.
Problem2: you select the DataSetReport Database and the demo folder, tables appears but column descriptions do not appear

Solution:

the DataSetReport has been installed without rights access to everyone and you should modify the rights as follow:

Steps:

1. Open the Microsoft SQL Management Studio Express
2. Select the DataSetReport database
3. Click **New Query**

Then depending on the authorization you want to apply:

- Give the right on the DataSetReport database to everybody, enter:
  ```
  use [DataSetReport]
  GO
  GRANT SELECT TO [public]
  GO
  ```
  then click **Run**

- Give the right on the DataSetReport database and demo folder only to everybody, enter:
  ```
  use [DataSetReport]
  GO
  GRANT SELECT ON SCHEMA::[demo] TO [public]
  GO
  ```
  then click **Run**

- Give the right on the DataSetReport database and demo folder only to one User, enter:
  ```
  use [DataSetReport]
  GO
  GRANT SELECT ON SCHEMA::[demo] TO [UserName]
  GO
  ```
  then click **Run**
